Bedside Menu Entry

meal options, and because patients have made a choice, food waste is reduced.

Increase Patient Satisfaction Scores

When you offer Bedside Menu Entry, your dietary staff will be out on the floor with patients, interacting and improving the patient experience.

By taking patient menu selections closer to the time when the meal is served, patients are better able to judge what they feel like eating. You'll also reduce error as there is less lag time for diet-order changes, relocation, or other factors to impact the patient's meal time.

With Bedside Menu Entry You Can

- Download patient profiles
- Walk through room lists
- View diet order and meal pattern goals
- Customize menu choices
- See a configurable number of alternates for each course
- View supplement orders
- View food descriptions, portion sizes, and exchange information
- Collect and record patient menu choices at bedside, without paper menus
- Reduce repetitive tasks with automatic data transfer from portable handheld units to your desktop system
- Increase consistency in diet compliance
- Offer same-day selections

For Healthcare Facilities

Overview

The Bedside Menu Entry system is one of CBORD's integrated solutions designed to put high-quality patient care in the palm of your hand. With this system your staff will be interacting with patients, and because of its vast mobile capabilities, staff will have frequent opportunities to exceed patients' expectations.

Record patient menu selections directly onto a palm-sized, handheld computer at bedside, then electronically transfer the selection data to the desktop-based diet office and food production systems. The handheld is lightweight, easy to carry, and fully mobile—it can go with you right to the patient's bedside. Best of all, there's no more reentering selections from hard to read, marked-up menus.

Patient Safety Is Never Compromised

Powered by your Nutrition Service Suite®, Bedside Menu Entry only displays compliant menus for your patients, using both traits and preferences to determine what menu to present. In addition, if a patient does not want an item, your staff need only tap the screen to view a list of alternate selections. By providing patients with menu choices, they feel that they are being listened to and cared for. At the same time, you will have control of menu choices, be able to offer cost-effective

Benefits

- **Increase staff-patient interaction**
- **Ensure patient safety**
- **Reduce food waste**
- **Manage budget goals**
- **Increase Press Ganey scores**
