

Net Handheld Inventory Management System

The NetHIMS user interface is clean, simple, and easy to use. Users may even swap between portrait and landscape views.

Comprehensive Solutions

CBORD® provides food and nutrition management, cashless card, and integrated security solutions to more than 6,000 organizations. Our focus is on comprehensive solutions that **increase revenue, reduce costs, guard patient safety, improve patient satisfaction, and integrate systems seamlessly.**

Innovative Products

Our innovation is customer driven. Working in partnership with users, we listen to the industry's evolving needs and develop solutions to keep you a step ahead.

Dedicated Service

The quality of our products is made greater by the caliber of our employees. Through open dialogue with you, our customers, CBORD strives to not only meet, but exceed your expectations; we are committed to providing superior service in all aspects of our customer relationships. You can reach us twenty-four hours a day, seven days a week, and know you have a team dedicated to your satisfaction and success.

*Wireless connection optional.

Food Service Solution for Healthcare Facilities

Overview

The next generation of CBORD's Handheld Inventory Management System (HIMS) has arrived, with dozens of new enhancements that improve the speed and accuracy of inventory control. Whether you need to eliminate manual entry, reduce errors, improve productivity, or even streamline purchasing and receiving processes, NetHIMS is a strong solution for a variety of environments.

Mobile Inventory

A component of Foodservice Suite® (FSS) and NetMenu®, this powerful software allows users to record inventory counts directly onto a wireless handheld computer, instantly updating the computer running the inventory management module of FSS. Inventory may be recorded and organized based on unit, storage location, date, or a date range. New inventories may be created from scratch on the handheld, making it easy to update FSS or NetMenu on the fly. In addition, system administrators may link UPC codes to general items in FSS right on the handheld.

Reliable Environment

NetHIMS is a Windows application designed for Windows Mobile systems and is also engineered to work with a barcode scanner and a wireless network. NetHIMS updates Foodservice Suite and NetMenu via wireless connection*, ensuring up-to-the-minute data integrity. A NetHIMS server hosts the web services included with the application.

Benefits

- **Reduce time spent taking inventory and resolving errors**
- **Wireless connection eliminates the need to download data**
- **Improve data integrity with up-to-the-minute inventory tracking**
- **Streamline purchasing and receiving**
