

## Order Transmission and eReceiving

### eReceiving

eReceiving is an optional enhancement to the Order Transmission module. It allows you to get electronic “invoices” from vendors, enumerating each of the items that are on the truck for delivery. The data is current and reflects any substitutions, price changes, or changes in quantities between the time the order was placed and when the product is delivered. Just imagine the time that would be saved if the receiving process could be limited to simply confirming that the items on the receiving document were actually delivered! The system allows users to see and resolve any differences in what was ordered and what was received, and virtually eliminates manual data entry in the receiving process. Furthermore, depending on vendor capabilities, eReceiving can optionally add new vendor items on the fly—a great time-saver when dealing with substitutions or new items called in after the order was transmitted.

A large and growing number of national vendors already participate in CBORD’s electronic purchasing systems, including GFS®, Sysco™, and US Foodservice®, as well as purchasing-logistics companies such as DSSI®.

## Food Service Solution for Healthcare Facilities

### Overview

The Order Transmission interface for Foodservice Suite® (FSS) simplifies purchasing procedures, saving time and improving accuracy. From placing an order to verifying goods received and reconciling invoices, CBORD’s electronic interfaces allow healthcare facilities and their food vendors to maintain accurate and timely information, and virtually eliminate manual data entry for purchasing, receiving, and vendor item and price updates.

### Order Transmission Module

The Order Transmission module of FSS electronically retrieves vendor item and price information directly from vendors. All the details are there, including descriptions, pack sizes, and contracted prices. Then, when orders are created for the participating vendors, they can be transmitted electronically, eliminating phone calls, faxes, and errors. Depending on vendor capabilities, healthcare facilities can even receive electronic confirmation of orders with eReceiving.

## Benefits

- **Automate ordering and receiving**
- **Improve communication with vendors**
- **Eliminate manual errors and duplication**
- **Ensure that data is current and accurate**
- **Connect with standard (EDI) and proprietary data exchange formats**
