

Unit Orders

Food Service Solution for Healthcare Facilities

Overview

Unit Orders is a simple web-based extension for the Foodservice Suite® (FSS) that allows non-FSS users to place orders with production units, storerooms, and commissaries without the requirement of having FSS installed on their workstations. By extending the reach of FSS to other potential users, the Unit Orders module reduces administrative and product costs while helping to better serve your internal and external customers.

Applications

- On-Site Ordering
 - Lounges
 - Coffee shops
 - Convenience stores
 - Retail outlets
 - Tray lines
 - Floor stocks
 - Frequent and occasional deliveries
 - Storage room and supply room restocks
 - Catering operations

Applications Continued

- Off-site Ordering
 - Remote retail operations
 - Remote production kitchens
 - Remote service units
 - Baked goods
 - Meals On Wheels

User-Friendly Interface

The simple online interface of the Unit Orders module requires virtually no end-user training. The online order-taking process eliminates time-consuming manual procedures that are prone to error, and ensures accurate and timely cost allocation. Better yet, the application leverages the power of the comprehensive stock management capabilities in FSS.

The Unit Orders webpage features an intuitive layout, making it easy to view and create orders. Configurable user privileges designate which units are available for viewing by a particular user. Users can easily create and update orders, as well as view orders that have already been placed.

Benefits

- **Simplifies ordering for all units**
- **Automates the supply process for the central production area**
- **Requires no new hardware at the ordering units as it is web based**
- **Integrates with FSS for inventory management and department or unit charges**
- **Ensures secure access and ordering**

Unit Orders

It is easy to configure Unit Orders to conform to your facility's graphic design standards. The application features a fully customizable header that may be configured to include logos, links, and more, and style sheets that can be modified to reflect a standard look and feel.

Two Ways to Order

Orders can be created in two ways. The first presents end users with a set of Transfer Requisition Templates. Once the user chooses a template, he or she simply updates the order quantities as needed. Any number of templates can be defined individually for each unit and can be predefined with the quantities most typically ordered (or can default to zero).

The other method makes use of the Standing Order concept, which can ensure that an order is placed even when someone "forgets" to submit it by the deadline. This can also be used for recurring orders, which can be created and processed automatically—with or without customer intervention. Par levels and standing order quantities can be maintained by the user at each ordering location.

Comprehensive Solutions

CBORD® provides food and nutrition management, cashless card, and integrated security solutions to more than 6,000 organizations. Our focus is on comprehensive solutions that increase revenue, reduce costs, guard patient safety, improve patient satisfaction, and integrate systems seamlessly.

Innovative Products

Our innovation is customer driven. Working in partnership with users, we listen to the industry's evolving needs and develop solutions to keep you a step ahead.

Dedicated Service

The quality of our products is made greater by the caliber of our employees. Through open dialogue with you, our customers, CBORD strives to not only meet, but exceed your expectations; we are committed to providing superior service in all aspects of our customer relationships. You can reach us twenty-four hours a day, seven days a week, and know you have a team dedicated to your satisfaction and success.
